

Horchheim Tunnel Germany

Location: Germany
Client: DB InfraGO AG
Construction period: September 2023 – October 2023
Services: Construction of new electrical power installations; tunnel safety lighting; power supply to the North and South portals; electrical shaft heating
Contract value: 502,000 euros

Due to its poor structural condition, the Horchheim Tunnel was completely closed whilst renovation works were carried out.

Our scope of work included the installation of new electrical power systems, tunnel safety lighting, the power supply at the south and north portals, the power connections to the signal boxes, and the electric shaft heaters.

To prevent frost damage, the drainage and flushing shafts of the tunnel drainage system are fitted with electric shaft heaters.

The heaters are fitted with water level monitoring and temperature control with integrated overheating protection.
