RHOMBERG SERSA RAIL GROUP

Calibration of measuring tracks 2024 - 2025
Switzerland

Maintenance and calibration of various measuring tracks throughout Switzerland under a framework agreement in accordance with the applicable SBB standards. To this end, we have developed a systematic standard procedure for the annual inspection of the measuring tracks in collaboration with SBB.

The tracks are assessed annually for their alignment and level, and, where necessary, adjusted back to the correct position. In the event of ongoing or recurring deformations, specific structural measures may be proposed to stabilise the gauge tracks. To this end, specialist staff carry out an inspection of the track and steelwork.

Location:	All of Switzerland
Client:	SBB AG
Construction period:	2024 - 2025
Services:	Nationwide maintenance and calibration of various measuring tracks; development of an overall concept and procedures for the annual calibration and maintenance of measuring tracks
Executing companies:	Rhomberg Sersa Rail AG
