

Cologne Transport Authority Germany

Location: Germany
Client: KVB – Cologne Transport Authority
Construction period: April 2023 – December 2023
Services: Refurbishment of technical rooms; tunnel safety lighting using luminaires developed in-house; SingleLiT Metro lighting systems
Contract value: 1.6 million euros

Three projects were carried out simultaneously in Cologne: the Breslauer Platz and Poststraße tram stops, and the renewal of the lighting in the multi-storey car park at the stadium.

The works include the replacement of the tunnel safety lighting with the in-house developed Rhombberg SingleLiT Metro luminaire, the refurbishment of plant rooms, and the modernisation of the multi-storey car park lighting, including intelligent control and monitoring technology.

The work is being carried out predominantly whilst the facilities remain in operation and, in some cases, exclusively during night-time closure periods.

By working on several projects in parallel, the available working hours are utilised to the full.
