

Dortmund Central Station Dortmund, Germany

Location: Germany
Client: DB Netz AG
Construction period: 2017–2024
Services: Modernisation of Dortmund Central Station – refurbishment of 9 platforms and infrastructure
Contract value: 6.9 million euros

As part of the modernisation of Dortmund Central Station, the entire pedestrian underpass, as well as the connecting hall and the northern entrance area, were rebuilt.

A high-performance 10 kV medium-voltage system with two 630 kVA dry-type transformers was installed in the post and luggage tunnel. The cable routes ran through the entire station.

Construction took place 'whilst services were running'. Only specific sections were closed off, or the platform currently undergoing renovation.

The successful completion of the project was made possible by the focused cooperation of all those involved, as well as by pragmatic solutions.
