

Track diagnostics: Measuring service for metre-gauge track and railway corridor

Comprehensive measurement services and analysis options

Product description

The three companies Rhomberg Sersa Rail Group, iNovitas AG and Rosenthaler + Partner AG have formed a consortium under the name "ARGE FahrwegDiagnose". The focus of ARGE FahrwegDiagnose is on metre-gauge railways. We accompany and support our customers with comprehensive services and maximise the benefits for them. Within the consortium, we not only bundle services, but also qualified expert knowledge from the fields of measurement technology, geomatics and railway construction and maintenance.

Our services

- Track and overhead line diagnostics
- Measurement data analysis
- RealityCapturing image service, e.g. clearance profile analysis
- Depression measurements
- Visualisations

Your advantages

- Savings through a combination of services
- Savings through high measuring speeds
- High degree of automation
- Standardised vehicle for the Swiss metre gauge → Comparable measurements
- Loaded measurement according to EN 13848
- Comprehensive recording and measurement of the track
- Measurement of nationally and internationally recognised parameters in accordance with EN 13848 and RTE 22540
