RAILium.

Machine Management

The digital **backbone** of rail construction.

Machinery, personnel
and maintenance:
managed transparently,
documented in full.

THE CHALLENGE

THE REALITY OF RAIL CONSTRUCTION.

Lack of transparency

Availability and order status are not always visible.

High compliance workload

Documentation and inspection requirements tie up valuable resources.

Reliance on individual expertise

Critical knowledge is not retained for the long term.

High coordination workload

Information has to be requested and consolidated manually.

Resources are hard to manage

Machinery, personnel and qualifications are held in separate systems.

THE SOLUTION – RAILIUM

ONE SYSTEM. ALL PROCESSES.

Full transparency

Critical resources in view at all times.

100% ECM-compliant and audit-ready

Complete, traceable and available at any time.

Knowledge retained for the long term

Less dependence on individuals.

Efficient collaboration

Less coordination overhead, no manual handovers between systems.

One shared data foundation

A reliable basis for sound decisions.

RAILIUM — THE INTEGRATED SOFTWARE SOLUTION.

RAILium brings transparency to critical resources in rail construction and gives you reliable control over them.

From machinery and personnel to qualifications, workshop processes and compliance requirements: all relevant information is available on one shared platform and always up to date.

The result: better-informed decisions, less coordination effort, ECM-compliant processes and greater availability of the resources your projects depend on.

RAILium lays the groundwork for higher performance in rail construction.
